

ABSTRACT OF THE DISCLOSURE

A ventilated toilet assembly includes a ventilated toilet seat device
5 for positioning between a toilet bowl and a water tank. The device
comprises a base section having an aperture extending therethrough. The
base section is positioned between the toilet bowl and the water tank. An
exhaust conduit extends through the base section. An air moving assembly
is mounted in the exhaust conduit for selectively drawing air into an
10 exhaust inlet and forcing the air outwardly through an exhaust outlet. A
toilet seat is hingedly attached to the base section. A tubular member is
mounted on a bottom side of the toilet. The tubular member forms a loop
and has a coupler fluidly coupled thereto. The coupler is aligned with and
is fluidly coupled to the exhaust inlet when the toilet seat is abutted
15 against the toilet bowl. The tubular member has a plurality of apertures
extending therein.
